

Rod Ends and Spherical Plain Bearings from J.W. Winco, Inc.

INCH AND METRIC ROD ENDS

Rod ends are available with threaded stems or tapped threads. The rod end body is made of zinc plated steel; the ball is hardened and ground. The external bronze ring makes these rod ends self lubricating and **maintenance free** which allows the lowest possible friction. Operating temperature range is -22 F to 300 F.

METRIC SPHERICAL PLAIN BEARINGS

Spherical plain bearings are available in zinc plated steel or stainless steel. The bearing ball inserts for both versions are hardened and ground and **maintenance free**.
